

A heatmap showing the frequency of transitions between different versions of a software package. The x-axis and y-axis both represent versions from 2.1.0 to 5.1.0. A diagonal line from the bottom-left to the top-right indicates self-transitions. The color scale ranges from yellow (low frequency) to dark red (high frequency). The plot is divided into two regions: 'upgrades' (top-left) and 'downgrades' (bottom-right). The most frequent transitions are along the diagonal and between adjacent versions, with a notable cluster of high-frequency transitions between versions 2.3.0 and 2.4.0.

downgrades
