

The chart displays the proportion of devices running different Android versions over time. The y-axis represents the proportion (0.0 to 1.0), and the x-axis represents the date (Oct 2011 to Jun 2014). The legend on the right lists Android versions 7 through 20, each associated with a specific color. The chart shows a clear trend of newer versions replacing older ones. Version 7 (yellow) starts at approximately 0.1 in Oct 2011 and drops to near 0 by mid-2013. Version 10 (dark red) starts as the most prevalent version but declines steadily. By mid-2014, versions 18 (red) and 19 (dark red) are the most common, while versions 7-10 are no longer visible.
